

Java Learning Center

No.1 In Java Training & placement

- Q14) What are the ways available to implements actions?
- Q15) What is default action?
- Q16) What is default result?
- Q17) How can I implement DispatchAction like funationality in Struts 2?
- Q18) What is the difference between local results and global results?
- Q19) What is the difference between local exceptions and global exceptions?
- Q20) Explain Struts 2 Action life cycle?
- Q21) What is the difference between action errors and field errors?
- Q22) How can I use message bundles in Struts 2?
- Q23) What is ActionContext?
- Q24) What is ValueStack?
- Q25) What is OGNL?
- Q26) How can I perform validations in Struts 2?
- Q27) How can I implement basic validations in Struts 2?
- Q28) What are the list of XML based built-in validators?
- Q29) What are the steps to use XML based built-in validators?
- Q30) What are the list of Annotation based built-in validators?
- Q31) What are the steps to use Annotation based built-in validators?
- Q32) What are the steps to develop,register and use Custom validators with XML configuration?
- Q33) What are the steps to develop,register and use Custom validators with Annotation configuration?
- Q34) What is Interceptors and what are the uses?
- Q35) What are the built-in Interceptors provided in Struts 2?
- Q36) What are the steps to develop,register and use Custom Interceptors?
- Q37) What is the use of alias Interceptors?
- Q38) What is the use of chain Interceptors?
- Q39) What is the use of conversionError Interceptors?
- Q40) What is the use of execAndWait Interceptors?
- Q41) What is the use of exception Interceptors?
- Q42) What is the use of params Interceptors?
- Q43) What is the use of prepare Interceptors?
- Q44) What is the use of modelDriven Interceptors?
- Q45) What is the use of servletConfig Interceptors?
- Q46) What is the use of timer Interceptors?
- Q47) What is the use of token Interceptors?
